## **Introduction:**

### **Grenada Drug Epidemiology Network (GRENDEN)**

The Grenada Drug Epidemiology Network (GRENDEN) is the mechanism through which Grenada collects, analyzes, and disseminates information on drugs, and related information, for the purpose of monitoring trends, developing policy, and implementing appropriate programmes and responses. It is comprised of institutions which work in the area of drug control. The objectives of GRENDEN are: To provide accurate, relevant and timely statistical data on the nature and extent of the drug situation in Grenada; To increase coordination, dialogue, and cooperation among the institutions which work in the area of drug control, through the exchange of drug-related statistical information; To inform policy makers and the general public on drug trends and related matters. GRENDEN, formerly known as GRENDIN, was established on 11 December 2002, and endorsed by Cabinet, effective 22 December 2002. The Drug Control Secretariat is the National Observatory on Drugs in Grenada. It performs the administrative functions of GRENDEN.

The information collected and disseminated from the institutions is in response to twelve (12) Indicators which comprise the ***GRENDEN Questionnaire of Indicators***. The Indicators are:

- 1A. Admissions; Rathdune Psychiatric Unit
- 1B. Admissions; Carlton House
- 1C. Admissions; General Hospital
- 1D. Admissions; Mt. Gay Psychiatric Hospital
2. Mortality; Epidemiology Unit
3. Scope Of The Mechanisms For The Control Of The Diversion Of Pharmaceutical Products And Controlled Substances; Pharmacy Unit
4. Seizures; Customs and Excise Department
5. Seizures, Arrests, Court Cases, Convictions; Criminal Records Office
6. Criminal Deportees; Criminal Investigation Department
7. Financial Crimes; Financial Intelligence Unit
8. Firearms, Ammunition, Explosives, Other Related Materials; Royal Grenada Police Force
9. Incarceration; Prisons
10. Tests For The Presence of Drugs; Produce Chemist Laboratory
11. Extent, Patterns and Trends In Drugs
12. Magnitude of Drug Consumption

**Title and Author:**

Third Secondary Schools' Drug Prevalence Survey, 2013; Dr. Cecilia Younger, Technical Consultant Professor, St. George's University

**Objectives:**

1. To determine the prevalence and incidence of drug use among secondary school students in Grenada.
2. To establish comparisons with the results of the first and second secondary school drug prevalence surveys conducted in 2002 and 2005 as a means of informing policy makers of changes in prevalence and incidence and new findings.

**Results:**

This report presents the findings of the third secondary school drug prevalence survey administered to one thousand four hundred ninety-three (1,493) students representing a weighted sample of five thousand five hundred seventy (5,570) 2<sup>nd</sup>, 4<sup>th</sup> and 5<sup>th</sup> form students in Grenada in 2013.

Overall, the prevalence of substance use in Grenada has decreased in 2013 when compared to 2002 and 2005.

Moreover, this report finds that alcohol is the number one drug among adolescents. In addition, overall there is a reduction in alcohol use among secondary school students in Grenada with the current and past year use going back to pre-Hurricane Ivan levels. However, the results show among that the proportion of students consuming alcohol, males had a larger proportion reduction than females; possibly because there were more efforts in alcohol reduction directed toward males. The results also showed that the reduction of alcohol consumption varied based on form level; Form 2 students had the highest level of reduction. Related to this, overall, prevention programs, such as HLFE, and other health awareness forums are having a positive impact. The lower forms benefit more from awareness programs than the other forms.

The report also finds that marijuana use is the 2<sup>nd</sup> most popular drug that is presently being used among secondary school students. In relation to this, the data shows that the majority of students currently not using any substance are curious to try marijuana. The results show though that marijuana use has decreased drastically in 2013. Nevertheless, it is noted that there is more decrease in males than females and that the issue of use is after 3<sup>rd</sup> form. In relation to this, cigarette smoking decreased in 2013 for all time points; the reduction is seen more with males than females and at the 2<sup>nd</sup> form level. Moreover, there is not much change in reported tranquilizer and stimulant use.

As it relates to access, the ease of access reduces with harder drugs, such as Heroin, cocaine, and crack. Moreover, marijuana is accessed more through friends while harder drugs are accessed at social events. The results show though that overall the majority of students see drugs at or around school. The data also shows that of the students not using substances, almost a third would try a substance if given the opportunity.

However, the data shows an increase in inhalant use, particularly among the 4<sup>th</sup> form students; males reportedly having higher rates of use.

The major areas of concern regarding drug use among secondary school students in Grenada include inter alia: low level of drug prevention education, the potential for peer motivated drug use, accessibility of illicit drugs, the significant consumption of alcohol, marijuana and cigarette, and inhalants and solvents among secondary school students.

The following recommendations are therefore proposed to address the above issues:

- Development and implementation of tobacco legislation for the state
- Increase the awareness of national school policy on drugs and link the policy to the Education Act.

- Formulation of a national alcohol policy
- Amend of the Liquor Dealers' License act.
- Increase drug prevention and awareness programming to Carriacou.
- Programs should be more directed to Form 2 students.

The limitations of the results of this study reflect the reliance on self-reporting drug use. In general, self-reporting of adolescents provides an under-estimate of the prevalence of drug use because of the under reporting. People are prone to under report use or some people might report things they are not doing. Because the survey was very long, there is a possibility that participants were fatigued and did not take time in reading and responding to questions.
