

GRENDEN FACT SHEET

Vol. 6, No. 3

September
2014

Data from the 2013 Drug Prevalence Survey conducted in secondary schools in Grenada, showed that the prevalence of alcohol consumption among males decreased in comparison to consumption among females. Decrease rates were 18.6% and 5.6% respectively in comparison to 2005. Figure 1 and 2 below illustrate the lifetime prevalence of alcohol and marijuana use by gender, based on surveys conducted in 2002, 2005 and 2013.

Figure 1: Lifetime Prevalence of Alcohol Use by Gender

A comparison of marijuana use by gender revealed an increase of 8.2% in male prevalence rate in 2013 and a 6.8% reduction in prevalence rate among females for the same period when compared with the 2005 survey.

Figure 2: Trends In Prevalence Of Marijuana Use By Gender
